

Transforming Australia's supply chain

Modern intermodal precincts allow freight to move seamlessly between transportation modes, maximising efficiency, contingency and sustainability benefits for generations to come.

Find out more

Who

National Intermodal is transforming Australia's supply chain by creating a network of world-class intermodal precincts to meet the country's growing freight demand and ensure delivery of products to businesses, homes and families.

What

We aren't just building terminals. We are developing new, efficient warehouses that use rail for long-distance freight. By moving more freight from road to rail, we are enabling more resilient, efficient and

Find out more

sustainable freight movement across the country.

Find out more

Why

This nationally significant freight infrastructure is essential to Australia's economic future, helping drive down costs, while increasing national productivity. By ensuring the supply chain is equipped to embrace growth and navigate disruption, we are supporting Australian households and improving living standards for future generations.
