Beveridge Intermodal Precinct

JOHN HOLLAND

NATIONAL INTERMODAL

PROJECT UPDATE

OCTOBER 2026

Beveridge Intermodal Precinct

Work continues to progress on the Beveridge Intermodal Precinct, including construction of the new rail connection that will link the future terminal to the national rail network.

Over the coming months, you may notice increased construction activity and more heavy vehicles delivering bridge structures, concrete and other materials to site.

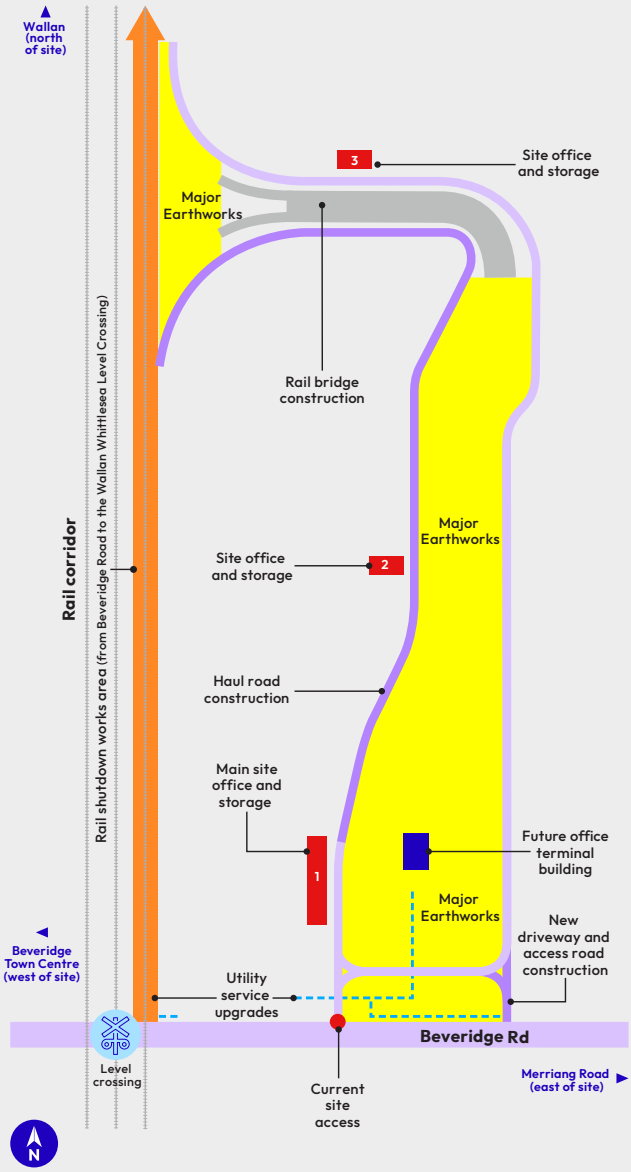

The project reached several key milestones in the last quarter, including the successful installation of rail turnouts and completion of major foundation works. Construction is now moving above ground, with Super-T concrete bridge beams being installed to form the new rail bridge and bring the future freight network closer to reality.

Thank you to everyone who joined us at our community pop-ups in August. The conversations and feedback we receive during the project help us better understand local priorities and plan our works in a way that reduces impacts wherever possible.

Construction works site map

When are we working?

Standard construction hours

7am to 6pm, Monday to Friday
7am to 1pm, Saturdays.

Out of hours

Some works are required to take place out of normal construction hours.

24 hours

24 hour works are sometimes required during peak construction activities. We will notify if out of hours works are required.

Works Snapshot: October – December 2026

Over the next few months, you may notice an increase in project activity including:

Major earthworks continuing across the site, with excavated material reused, wherever possible, to reduce the need for additional truck movements.

Rail bridge construction, including ongoing delivery and installation of large Super T concrete bridge beams.

24-hour rail works from 7–9 November during a planned rail shutdown, allowing critical works to be safely completed within the rail corridor.

Upcoming Works

Proposed timing	Activity	Description
October–December 2026 (ongoing)	**Major earthworks**	Earthworks will continue across the site, including excavation and placement of material for the future rail formation and terminal yard. Works will also include construction of the northern rail embankments, drainage and permanent swales* to help manage water across the site.
October – December 2026 (ongoing)	**Rail bridge construction**	Ongoing construction of the bridge columns and supporting structures. Delivery and installation of 104 large Super T concrete bridge beams, along with other concrete works and installations of precast elements.
October – December 2026 (ongoing)	**Upgrading underground services**	Service providers will continue upgrading utilities along Beveridge Road to support future stages of the project. If any temporary service interruptions are required, affected residents will be contacted directly
7–9 November 2026	**Planned rail shutdown**	A planned rail shutdown from 7–9 November will allow critical works to be safely completed within the rail corridor. Long-welded rail will be delivered and temporarily stored within the corridor before being moved into the project laydown area during daytime hours.

Join us at one of our pop-up information events

October

We'll be holding community pop-up sessions mid-month, giving you the chance to speak with the project team, learn more about upcoming works and ask questions about the November rail shutdown.

Details of locations and times to be shared soon.

November

We'll be coming to the Whittlesea Show, so drop by and say hello to the team!

Whittlesea Show

- Saturday 7 November
- Sunday 8 November

Managing impacts

Noise and vibrations

Some construction activities may create temporary noise and vibration. Noise monitoring will continue throughout the works, with additional controls used where required. Higher noise levels may occur for short periods during activities such as rock breaking.

Dust and mud management

Water carts and other dust suppression measures will continue to be used across the site. Truck and wheel-washing systems will also help reduce mud and dirt being carried onto surrounding roads.

Bright lights

Where possible, construction lighting will be directed downwards and away from surrounding properties. During overnight rail works, additional lighting will be required to keep the work area safe for our crews.

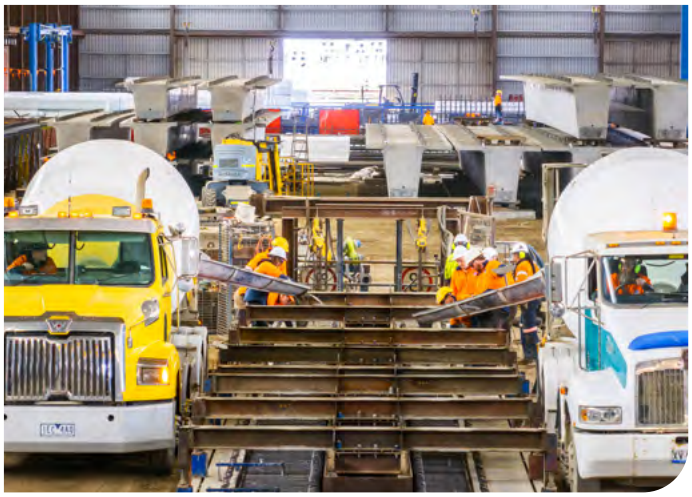

Traffic impacts

You may notice increased truck and heavy vehicle movements on Beveridge Road and surrounding roads as construction activity increases. Traffic management will be in place where required, including signage and traffic controllers.
